② The settings page will provide users with options to complete their profile, including important information such as weight and height. This data is crucial for accurate calculations related to physical activity and calorie consumption. By collecting this information, the fitness application can offer a more personalized and effective experience for each user. Example:

Goal Personalization: Based on the weight and height information, the application can set more precise and realistic fitness goals for each user.

Progress Tracking: By recording weight and height on the settings page, users can track their progress over time. This allows them to see changes in their body composition and adjust their goals accordingly.

Personal info page:

What do you want to do today?

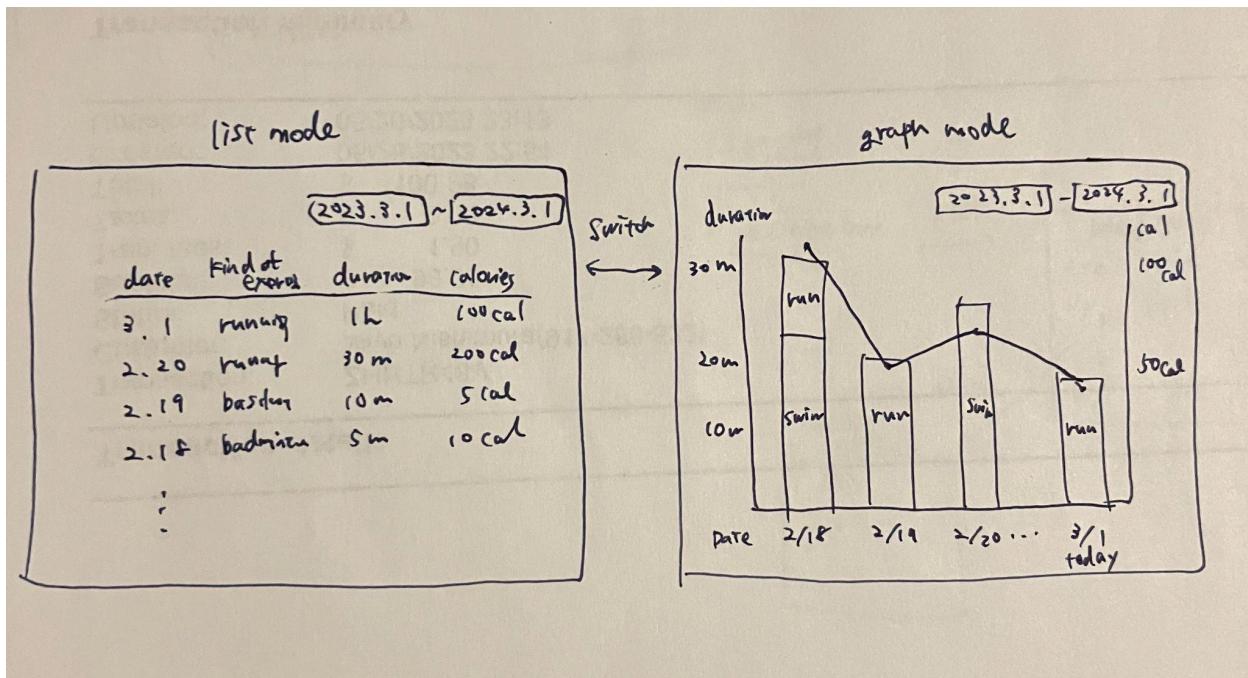

Record an activity

The main page is the primary screen of the fitness application. This is where users can access the core features of the application, such as record an activity already done, progress statistics.

History page:

Users can see their records of exercise duration and burned calories in the past on a list or on a graph. On the list, there are dates, kinds of exercise, duration and calories burned and the other hand, users can check the graph made from these parameters.

Chat page:

This app has a chat page. Users can create channels and communicate with others there, and send direct messages to them also like slack.
